### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael L. Robbins Reg. No. 54,774 on March 28, 2006.

The application has been amended as follows:

In claim 1, "*...wherein the zig angle at the second end is a chevron angle and the zig angle at the first end is less than the chevron...*" is replaced with *—wherein the zig angle at the second end is a chevron angle and the zig angle at the first end is less than the chevron **angle**—*

In claim 21, please replace "*...the zig angle varying along at least a portion of the plurality of zig-bursts...*" is replaced with *—the **zag** angle varying along at least a portion of the plurality of **zag**-bursts—*

### *Allowable Subject Matter*

2. Claims 1-12, 15-18, 21-25, 28-31, and 55-59 (to be renumbered 1-30) are allowed.
3. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-7, claim 1 discloses a template pattern for a reference surface of a disk for a hard disk drive having a head connected with a rotary actuator, wherein the template pattern comprises a servo wedge having a second end disposed between the first end and outer diameter of the disk further comprising a plurality of zig-bursts forming a zig angle relative to a plurality of pulses and varying along at least a portion of the plurality of zig-bursts, a plurality of

zag-bursts forming a zag angle relative to the plurality of pulses being a chevron angle, wherein the zig angle at the second end is a chevron angle and the zig angle at the first end is less than the chevron angle, which is neither taught or an obvious variation of the prior art.

Regarding claims 8-12, claim 8 discloses a template pattern for a reference surface of a disk for a hard disk drive having a head connected with a rotary actuator, wherein the template pattern comprises a servo wedge having a second end disposed between the first end and outer diameter of the disk further comprising a plurality of zig-bursts forming a zig angle relative to a plurality of pulses and varying along at least a portion of the plurality of zig-bursts, a plurality of zag-bursts forming a zag angle relative to the plurality of pulses being a chevron angle, wherein the zig angle at the first end is zero and the zig angle at the second end is chevron angle, which is neither taught or an obvious variation of the prior art.

Regarding claims 15-18, claim 15 discloses a template pattern for a rotatable data storage medium, wherein the template pattern comprises a servo wedge having a first end and a second end further comprising a plurality of zig-bursts forming a zig angle relative to a plurality of pulses and varying along at least a portion of the plurality of zig-bursts, a plurality of zag-bursts forming a zag angle relative to the plurality of pulses being a chevron angle, wherein the zig angle at the first end is zero and the zig angle at the second end is a chevron angle, which is neither taught or an obvious variation of the prior art.

Regarding claims 21-25 and 28-31, claims 21 and 28 discloses a template pattern for a reference surface of a disk for a hard disk drive having a head connected with a rotary actuator, wherein the template pattern comprises a servo wedge a second end disposed between the first

end and outer diameter of the disk further comprising a plurality of zig-bursts forming a zig angle relative to a plurality of pulses being a chevron angle, a plurality of zag-bursts forming a zag angle relative to the plurality of pulses varying along at least a portion of the plurality of zag-bursts, wherein the zag angle at the first end is zero and the zag angle at the second end is a chevron angle, which is neither taught or an obvious variation of the prior art.

Regarding claims 55-59, claims 55 discloses a template pattern for a hard disk drive having a head connected with a rotary actuator, wherein the template pattern comprises a servo wedge having a first end and a second end further comprising a plurality of zag-bursts forming a zag angle relative to a plurality of pulses and varying along at least a portion of the plurality of zag-bursts, a plurality of zig-bursts forming a zig angle relative to the plurality of pulses being a chevron angle, wherein the zag angle at the second end is a chevron angle and the zag angle at the first end is less than the chevron angle, which is neither taught or an obvious variation of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### ***Response to Arguments***

4. Applicant's arguments, see response to the previous Office action, filed January 10, 2006, with respect to claims 1-54 have been fully considered and are persuasive. The rejection of claims 1-54 has been withdrawn.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniell L. Negrón whose telephone number is 571-272-7559. The examiner can normally be reached on Monday-Friday (8:30am-5:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wayne R. Young can be reached on 571-272-7582. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
